1 Color gamut matching for tiled display walls

Grant Wallace, Han Chen, Kai Li

May 2003 **Proceedings of the workshop on Virtual environments 2003 EGVE '03**

Publisher: ACM Press

Full text available:  pdf(678.72 KB) Additional Information: full citation, abstract, references, citings, index terms

This paper presents a non-parametric full-gamut color matching algorithm. Color matching is important for the seamless appearance of tiled displays. In particular we address the case where the tiled display is composed of different types of projectors or DLP projectors with white enhancement. White enhancement produces a non-additive color space that is difficult to model. We perform our calibration using an inexpensive colorimeter as opposed to a highly accurate spectroradiometer. Our results s ...

2 HDR and perception: High dynamic range display systems

Helge Seetzen, Wolfgang Heidrich, Wolfgang Stuerzlinger, Greg Ward, Lorne Whitehead, Matthew Trentacoste, Abhijeet Ghosh, Andrejs Vorozcovs

August 2004 **ACM Transactions on Graphics (TOG)**, Volume 23 Issue 3 **Publisher:** ACM Press

Full text available:  [pdf\(359.06 KB\)](#)  [mov \(27:26 MIN\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#)s, [index terms](#)

The dynamic range of many real-world environments exceeds the capabilities of current display technology by several orders of magnitude. In this paper we discuss the design of two different display systems that are capable of displaying images with a dynamic range much more similar to that encountered in the real world. The first display system is based on a combination of an LCD panel and a DLP projector, and can be built from off-the-shelf components. While this design is feasible in a lab set ...
